

VICHANGE SIPHON

Maintenance and installation made easy

Tool-free removal

Height-adjustable
outlet

The patented siphon cartridge can be replaced without using any tools. It is no longer necessary to remove the urinal from the wall for maintenance purposes and it only takes 30 seconds to replace the cartridge – saving time and money. The urinal is, therefore, ideal for use in high-traffic public and semi-public sanitary facilities where siphons are replaced up to 4 times a year.

Advantages of ViChange siphons:

1. Easy to maintain and cost-efficient – it takes only 30 seconds to replace
2. No risk of clogging – the ceramic cover acts as a sieve
3. Compatible with ProDetect 2.0 – automatic flush due to user recognition
4. Easy installation – thanks to the height-adjustable outlet it is compatible with the connections of many other urinals, making it perfect for refurbishment projects
5. Easy to clean outlet – a plumber's snake (\varnothing max. 6 mm) can be used after the ViChange cartridge has been removed.^{1,2}

1. Plumber's snake cannot be used with siphonic urinals without ViChange.
2. Villeroy & Boch assumes no responsibility for any damage to the ceramic.
